About this Document

Please find the most recent documentation online at:

<https://bit.ly/gaia-stamps-free-doc>

Product Overview

The StampIT! Collection for Unity consists of high quality terrain heightmaps in high 4K resolution which can be used for blending landscape features on the Unity terrain.

This asset contains heightmaps which are preconfigured to be used with Gaia.

The stamps in this free asset have a resolution of 2K. If want the stamps in 4K resolution or just want to support me, you can get the [paid version of this asset](#) on the Unity Asset Store.

Quick Start

The stamps are in format EXR and stored in Assets/Gaia User Data/Stamps. Please refer to the Gaia documentation about how to use stamps with Gaia.

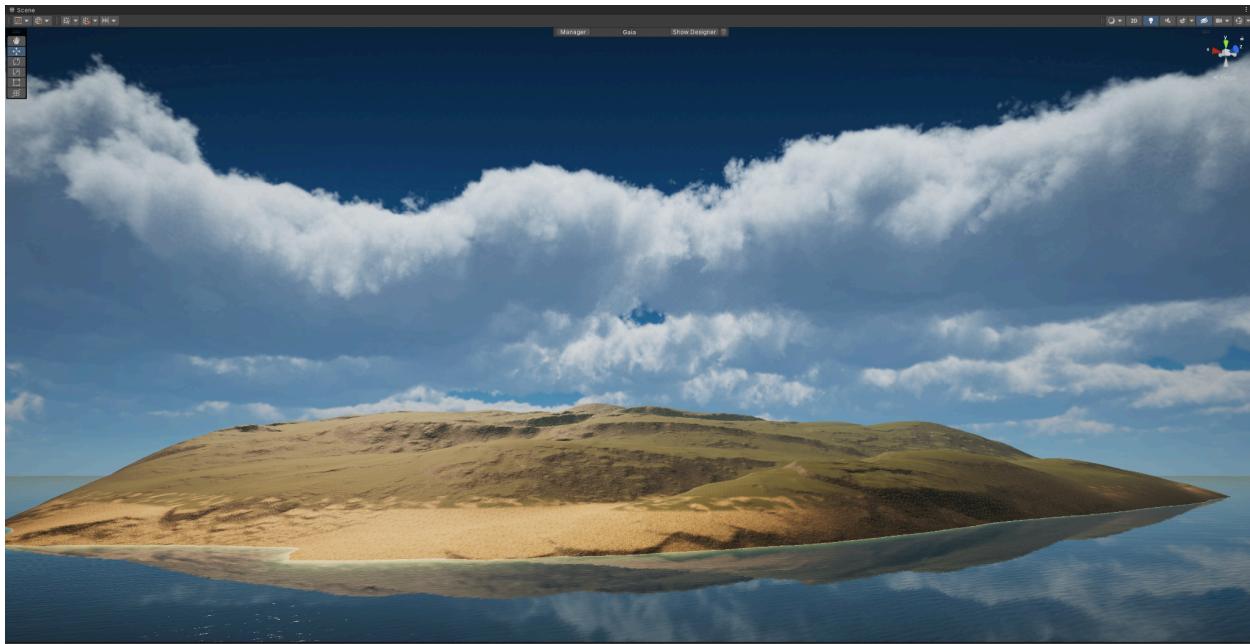

Quick example: In World Designer set Shape Input Type to Image. Click the Stamps button. A dialog opens which provides the selection of the 2K stamps.

Let Gaia create the world and you'll get something like this for Canyon:

5

Or Highlands:

Terrain Textures - FREE

If you need textures for terrain, here's a link to my asset

- [Terrain Textures - FREE \(for MicroVerse and other Assets\)](#)

The asset contains terrain textures which you can use in combination with my stamps.

This is a "Thank you very much for your continued Support!" asset, for purchasing my Terrain Stamps and for the positive reviews. It's very motivating.

So I made the terrain textures **FREE for everyone!**

Ultimate StampIT! Collection

If you need even more stamps you can get the [Ultimate StampIT Collection](#) from the Unity Asset Store which contains **1050+ stamps in 32+ categories**.

You can check out my [StampIT! Collection - FREE Examples](#) asset to get even more stamps, those are in 4K. And FREE! If you like them, I'd appreciate the support. Thank you very much!

Stamp Converter for Gaia

I've also created a [Stamp Converter for Gaia](#) which is FREE as well.
